

**Job Title: Java Automation Engineer**

**Job Location: Remote**

Agilea Solutions is a rapidly growing, energetic consulting company with a fun, fast-paced team environment. In this great company you will bring us your passion to deliver, your strong technical skills, and we will provide you with the opportunity to deliver innovative solutions to clients. We help clients ensure their Workforce Management (WFM) systems can respond to rapidly changing business needs and deliver more effectively. Timekeeping, Time Off management and Scheduling are not only key components of WFM systems, but they are crucial business processes for our enterprise clients. Our TestAssure automated testing software delivers value to our clients by helping them properly test their WFM systems to ensure those systems continue to delivery accurately and with precision.

**Position Summary:**

The Java Automation Engineer position is responsible for providing technical expertise, leadership and execution while working to enhance our TestAssure automated testing platform. You will learn and contribute improvements to our continuous integration/delivery toolchain and will build automated testing solutions for Fortune 100 clients in the enterprise Time & Attendance Industry. Our teams consist of cross-functional resources, so while your responsibilities will be focused on automated testing solutions in Java, the position will provide opportunities for growth in continuous integration, cloud-based infrastructure, workforce management and human capital management.

**Essential Duties & Responsibilities:**

- Work collaboratively with team members in an agile environment
- Participate in user story development and understand the features being developed such that the associated test cases can be automated.
- Read, understand, and contribute additional testing scenarios to user stories; apply additional boundary cases to ensures proper test coverage
- Understand and expand our custom automation framework
- Support your team's existing new development efforts
- Comfortable with setting up Java development environments, code, debug and troubleshoot code developed by themselves and others
- Research and evaluate relevant solutions and present alternative options; produce technical documents
- Ability to manage multiple tasks, work in a team environment, understand and be responsive to project and customer needs
- Ability to estimate time required to complete a task, communicate progress, and deliver to milestones
- Good oral and written communication skills; ability to work remotely

**Preferred Technical Expertise and Skills:**

- Intermediate to advanced level Java development
- Experience using Docker for container driven testing and development
- Intermediate to advanced level knowledge of GIT and other version control systems
- Experience working with RESTful APIs based on JSON and XML
- Experience with continuous integration best practices and implementations
- Excellent problem-solving skills and ability to work independently to troubleshoot issues and build innovative solutions
- Independent and self-motivated learner
- Passion for automated testing
- Experience with WFM systems, Kronos and/or Ultimate software is an asset
